

Behavioral Health Virtual Consult

Facilitating timely access
to needed specialists.

Situation

The prevalence and impact of behavioral and mental health conditions is significant; behavioral and mental health providers are in high demand and short supply.

Solution

With Synzi, your staff can quickly connect your on-call behavioral health specialists with your patients for a virtual consult, helping patients get access to the care they need when they need it most.

Immediate Answers

Access your network of behavioral health specialists anytime, anywhere, on any device.

Convenient Consults

Obtain a consult in a more convenient manner, reducing patient wait times and length of stay, and minimizing travel time / costs for offsite specialists.

Enhanced Satisfaction

Deliver impactful care with faster and better patient outcomes and improved patient and provider satisfaction.

Enabling Better Access to Your Behavioral and Mental Health Specialists

With a simple click, your medical staff can quickly access needed specialists and facilitate a virtual consult for enhanced care and satisfaction.

Efficient Evaluations

By providing quick access to your remote behavioral health specialists, Synzi can help your medical staff facilitate a virtual consult between specialists and patients. Using our communication platform, your staff can quickly and easily conduct a virtual consult which enables offsite mental and behavioral health specialists to connect, observe, and communicate with your patients. Instead of waiting hours (or days) in the Emergency Department (or other settings) for a specialist to be physically present for an in-person consult, your staff can facilitate a virtual consult to help determine if hospital admission or transport to another facility is needed in a more timely and cost-efficient manner.

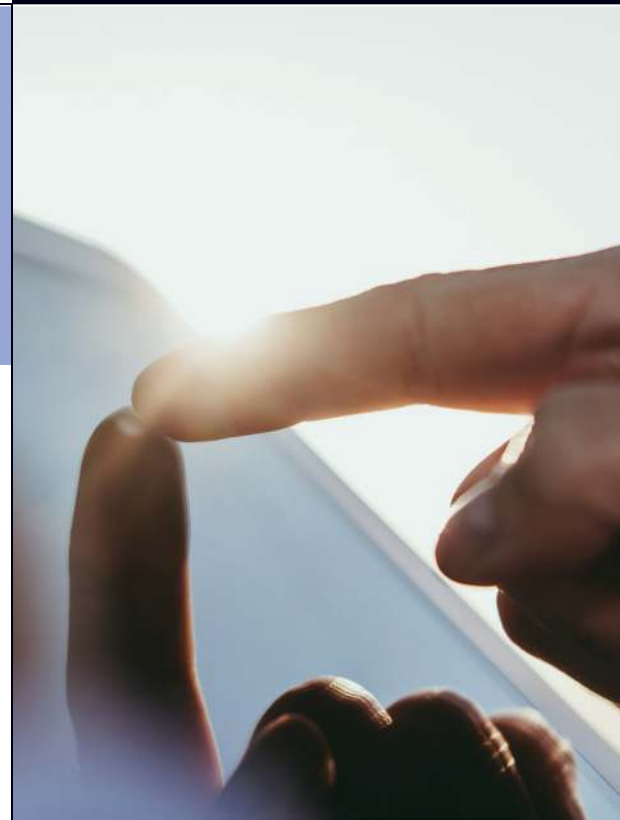

Impactful Patient Communications

For complex conversations that deal with difficult topics, clear communication between patient and provider is critical. Patients can converse with mental and behavioral health specialists in their primary or preferred language by easily adding one of our interpreters to a video call. Overcoming the language barrier is a big step for improving patient engagement and care, especially amongst the Limited English Proficient patient population.

Convenient Care Delivery

Synzi can help address potential workforce gaps by allowing your behavioral health specialists the ability to communicate with your patients and your staff via any device, anywhere, and at any time. Your specialists will have more convenient options in terms of when and where they provide patient care. Your specialists will also have greater flexibility - and more can be available remotely - in providing virtual consults round the clock.
