

We are Synzi.

A virtual care company dedicated to providing better ways for you to engage colleagues, specialists, and patients, simply and efficiently.

Synzi develops state-of-the-art solutions that make it possible for healthcare professionals to do what they do, only better.

Our virtual care communication platform can help your onsite staff quickly access offsite Medical Directors or specialists for immediate patient care, thus avoiding costly and unnecessary transfers while protecting the referral stream from nearby hospitals.

Your facility can also use our platform to conduct follow-up virtual visits with rehab patients who have returned home.

With our platform, your facility can expand the services offered and provide easy access to additional specialized care providers.

Family members can be included in the video calls and receive real-time information on the patient's progress and care plan.

Better technology.

Better care.

Better outcomes.

Synzi Solutions for Skilled Nursing Facilities and Long-Term Care Facilities

Virtual Visit

Due to busy schedules and various locations, clinicians may not be able to routinely follow-up with patients onsite or be able to visit your patients who have returned home.

With Synzi, clinicians can easily conduct convenient virtual visits with your patients, improving the quality and accessibility of care provided.

- Expand services readily available by facilitating patients' video-based visits with additional specialists who are not typically onsite (e.g., Cardiologists, Psychologists, Pharmacists, etc.)
- Enable your Occupational Therapists to conveniently follow-up with released patients to ensure your patients are correctly performing Activities of Daily Living (ADL) skills
- Include remote family members at the time of care to provide real-time updates on the patient's progress and care plan
- Help clinicians stay in more convenient and frequent contact with your patients

Virtual Consult

If a Medical Director or specialist is unavailable (or too far away) to be onsite for admission or to provide an in-person emergency consult, patient care may be delayed and patients can be routinely transferred to the ED (or another facility) for care. This creates unnecessary stress, costs and risks for patients, your staff, and your facility.

With Synzi, your onsite staff can quickly facilitate real-time virtual consults to obtain critical care decisions while your Medical Directors can optimize their productivity offsite.

- Access Medical Directors and/or specialized providers when admission decisions, immediate intervention or critical diagnoses are needed
 - Avoid costs and risks of transferring patients to other facilities
 - Minimize related hospital readmissions and protect referral stream from hospitals
 - Include remote family members at the time of admission / care to provide real-time updates on the patient's progress and treatment plan
